

Transportable GAGA BALL PIT!

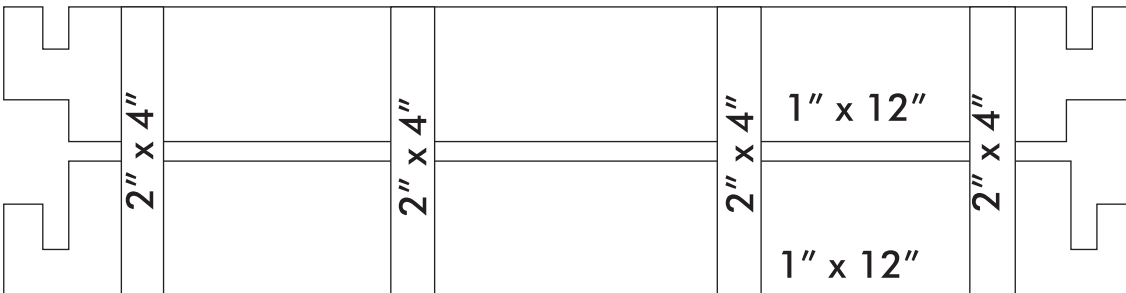

WHAT YOU LL NEED:

- 12 - 8' x 1" x 12" panels*
- 8 - 6' x 2" x 4" panel supports
 - cut into 24" pieces (24 pieces)
- 72 - 2" x 1/4" carriage bolts, washers, nuts

you can substitute 1" x 12" for cost and overall weight, but we recommend the more durable 2" x 12".

HOW YOU DO IT:

1. Assemble 6 of the below panel. Reference the below measurements for proper notching. Predrill for carriage bolts through the supports and panels.

2. The inside of the panel (non 2" x 4" side) should be smooth, so sand as needed. Carriage bolts should be inserted with the smooth end *toward* the inside, with the nut and washer on the outside.

3. After panels are finished, alternate the notches (up, then down, then up...). Slide the corresponding notches on the adjacent panel into place. This is a loose fitting so that you can easily set up and tear down the Gaga Ball pit.

4. Paint or customize as needed! Exterior paint or stain should be used if you plan on using this outdoors.

5. Round up a group of unruly teens and test it out! Aim low and get crazy.
